

DIY Dust Collector For Drilling Holes In Walls

To make a very effective dust collector for drilling holes in walls you need only a small plastic bag and some masking tape.

Strap a piece of masking tape on the plastic bag's edge leaving about half of the tape free, like shown in the picture bellow.

The other part of the masking tape will be used to fix the bag against the wall and just bellow the place where you will make the hole.

That is it, while drilling most of the dust will fall inside the plastic bag and you will have little mess afterwards to clean up.

Good luck, and do better than I did!
